DESCRIPTORS: \*Turbines, Turbine blades, Tests,  
Velocity.

Experiments at the Central Research Institute for  
Boilers and Turbines showed that the velocity stages  
with two rows of working blades are very economical.  
With a 20-mm nozzle height and with radial seals pres-  
ent the efficiencies of the two stages are 79% or better.  
The effect of the first stage, having a degree of re-  
action across the first row of moving blades of almost  
zero, depends very little on the state of the radial  
seals.
